Project Name	Credit Card Approval Prediction
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	- Discovers credit card product on bank website - Gathers income & identity documents for application - Opens Flask web app to check eligibility	- Enters personal and financial details into form - Selects income type, education and occupation - Uploads batch CSV for multiple applicant screening	- Receives instant approval or rejection result - Views risk score % and decision explanation - Retries with adjusted profile if rejected
Touchpoint <i>What part of the service do they interact with?</i>	- Credit card info page on bank website - Flask web app home page (/ route) - Application form with financial fields	- Single prediction form (/predict route) - Batch CSV upload page (/batch route) - XGBoost ML model processing in real-time	- Prediction result displayed on screen - Risk score % shown with approval status - IBM Watson ML cloud endpoint
Customer Thought <i>What is the customer thinking?</i>	- Will I qualify given my income level? - What documents do I need to prepare? - Is this AI system reliable and fair?	- Is my employment duration sufficient? - Will occupation type affect my prediction? - How does the model weigh my features?	- Why was I rejected by the model? - Can I improve my approval chances? - Is this result same as what bank gives?
Customer Feeling <i>What is the customer feeling?</i>	Curious and hopeful about getting approved for a credit card	Nervous and anxious about the prediction outcome	Relieved if approved; Frustrated if rejected without clear reason
Process Ownership <i>Who is in the lead on this?</i>	Data Engineer Avadhi Kukkamalla (Data collection, feature engineering)	ML Engineer Ram Charan Teja Naramsetty (Model training, evaluation)	Flask Developer & Business Analyst (Both team members) (App building, deployment)

Opportunities <i>How can we improve this stage?</i>	• Add eligibility pre-check guide on landing page • Provide document checklist before form • Show sample approved profile as reference	• Add real-time field validation in form • Show feature importance chart after prediction • Allow CSV template download for batch	• Display clear reason for rejection decision • Suggest profile changes to improve approval • Integrate Watson ML for cloud deployment
