

Communication

Date	03 July 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Communication Plan:

Effective communication is essential for a successful project demonstration. This document outlines the communication strategy used within the team and with stakeholders throughout the project lifecycle, including how updates, issues, and feedback were managed.

S. No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily	WhatsApp Group Chat	Avadhi Kukkamalla, Ram Charan Teja Naramsetty	Share daily progress on each Epic, discuss blockers, and align on next steps
2	Progress Update	Weekly	WhatsApp + VS Code Live Share	Both team members	Review completed notebooks, share model accuracy results, and plan the next week's tasks
3	Issue / Bug Discussion	As Needed	WhatsApp Call / Chat	Both team members	Resolve coding issues — e.g., Flask indentation error, IBM Watson login problem, CSV file path issues
4	Stakeholder Review	Bi-Weekly	SmartBridge SkillWallet Platform	Team members + Mentor	Submit completed Epic deliverables on SmartBridge platform and receive mentor feedback
5	Final Demo Rehearsal	Once	Screen Recording (Windows Xbox Game Bar)	Both team members	Practice the 4-minute demo video walkthrough covering all 5 Epics and Flask application

S. No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
6	Project File Sharing	As Needed	Google Drive / ZIP File Transfer	Both team members	Share project ZIP file (excluding large CSV files) for submission and GitHub upload

Communication Challenges & Resolutions:

S. No	Challenge Faced	Resolution / Action Taken
1	IBM Watson ML login required billing/credit card verification which was not available, blocking cloud deployment testing	Documented the complete Watson ML deployment pipeline in 05_watson_deployment.ipynb with full code and comments. The pipeline is ready to execute once IBM Cloud credentials are available.
2	Initial dataset downloaded was the wrong one (fraud detection dataset with V1-V28 PCA features) instead of the Credit Card Approval Prediction dataset	Identified the correct Kaggle dataset (rikdifos Credit Card Approval Prediction) with application_record.csv and credit_record.csv and re-downloaded it immediately.
3	Flask app.py had an IndentationError when the batch screening route code was pasted, causing the app to crash on startup	Replaced the entire app.py with a clean, complete version of the code ensuring consistent 4-space indentation throughout all route functions.
