Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • I need an instant decision on my credit card application • Why was I rejected without a clear explanation? • I want to know my eligibility before I formally apply • Banks should use AI to make faster, fairer decisions • I need a tool that screens all applicants at once	THINKS • Will my income level be enough to get approved? • Is the ML model making a fair and unbiased decision? • What if my credit history is not good enough? • Can I trust this web app with my personal financial data? • Would a higher income change my approval outcome?
DOES • Enters financial details into the Flask web application form • Uploads a batch CSV file to screen multiple applicants at once • Reviews risk score percentages for each applicant profile • Adjusts income or employment years and re-submits for prediction • Flags high-risk applicants for manual compliance review	PERSONA NAME <i>Bank Credit Analyst / Prospective Applicant</i> FEELS • Frustrated by slow, manual credit card approval processes • Anxious about unexpected rejection without clear reason • Relieved when the ML model gives an instant prediction • Confident when the risk score clearly explains the decision • Optimistic that AI-driven screening reduces human bias
