

Project Initialization and Planning Phase

Date	03 July 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example:

I am	I'm trying to	But	Because	Which makes me feel
Applicant seeking a credit card	Get instant credit card approval	My income type is commercial	No automated risk scoring system exists	Frustrated and uncertain

Problem State	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1 (PS)	A bank credit analyst reviewing credit card applications manually.	Screen hundreds of applications quickly and flag high-risk applicants.	Manual review is slow, inconsistent, and error-prone at large scale.	There is no automated ML system to predict applicant credit risk.	Overwhelmed, frustrated, and concerned about missing risky applicants.
PS-2	A prospective customer wanting to apply for a new credit card.	Know my chances of approval before submitting a formal application.	There is no self-service tool to check eligibility in advance.	Banks do not provide instant risk predictions based on financial profile.	Anxious, discouraged, and unprepared for unexpected rejection.

PS-3	A financial compliance officer screening batch applicants with past dues.	Identify all high-risk applicants with past-due records in one go.	Processing hundreds of records manually takes days and is unreliable.	Multi-class STATUS codes cannot be easily converted to binary risk labels.	Stressed and concerned about compliance risks and missed rejections.
